

HUMUS BY PMT

HUMUS livestock trailers

Some of your problems that HUMUS livestock trailer will solve:

Problems

Solution with HUMUS livestock trailer

Animals don't like to go on to the trailer because of the ramps. 😞

Animals enjoy going on to the trailer that is lowered to the ground. 😊

Animals are falling during the transport because the floor is slippery and they don't have anywhere to lean on. 😞

Non-slippery floor coating, floor ribs and high wheel covers help animals to stand and reduce their risk of falling or hurting themselves. 😊

Working with the trailer is dangerous because closing of the gates is complicated and time consuming and in the same time animals are pressing out of the trailer. 😞

The middle and back gate are closable with one movement. So you can easily close the gates after animals have boarded the trailer and they can't press out of the trailer. 😊

NB! Solutions may be optional equipment and extra charges may apply.

With Humus livestock trailer you have the possibility to assemble mobile workplace that enables you to give veterinary procedures, give maintenance and weigh the animal.

Carefully designed solutions bring you safer livestock transport and happier employees who also feel safer.

Humus livestock trailer is hydraulically lowerable which makes it safer, easier and more enjoyable for you to get the animals on and off of the trailer. Think of the reduced stress levels when you compare it to getting animals up the ramp.

The trailer has floor ribs, high wheel covers and it's possible to cover the floor with permanent non-slippery coating. These solutions help animals to stand and reduce their risk of falling or hurting themselves.

The middle gate is adjustable so dividing the areas into different sizes is made easy. You can separate for example older and younger animals or make transport with half-empty trailer.

You don't want to be in the way of a 700 kilo cow or would you? So the middle and back gate are closable with one movement. You can easily close the gates after animals have boarded the trailer and this way they can't press out of the trailer anymore.

Opening of the middle and back gate is also done with one movement. With the help of a rope you can do it even remotely.

Faster and more convenient internal washing is possible thanks to the space left between the side and the floor. This way dirt runs off faster while washing the interior.

Wide-ranging optional equipment helps you to create a livestock trailer that really helps you with your work. For example, adding the service unit makes it possible to maintenance your livestock right in the pasture.

In the end you'll have a mobile workplace that enables you to work with your livestock where ever the workday takes you.
